

The `jmsdelim` package

Jonathan Sterling

September 14, 2019

1 Overview

Sizing delimiters using `\left` and `\right` should be outlawed! The results are nearly always unaesthetic, primarily because the correct size of a mathematical delimiter is a typesetting consideration which does *not* emanate from the physical size of the interior.

Correctly sizing delimiters is very difficult, particularly in well-architected documents: a correctly engineered mathematical document will include macros for all operations, and these macros necessarily will include delimiters (such as parentheses). However, the correct size for the delimiter cannot be chosen ahead of time, because it will depend on the arguments; two options are available:

1. Provide optional arguments to each notation macro for choosing delimiter sizes. This is nearly intractable to do in practice.
2. Ignore delimiter sizes.

With `jmsdelim` we offer an alternative: the correct delimiter sizes can be set at the *leaf nodes* of a mathematical expression, and magically bubble upward through the delimiters.

1.1 Document interface

`\DelimMin` `\DelimMin{⟨intexprmin⟩}`

This sets the minimum delimiter size to `⟨intexprmin⟩` outside the current location; delimiter sizes are represented as natural numbers, with 0 the smallest size.

`\DelimMin` is the work-horse of `jmsdelim`; let us consider an example of what one might do prior to adopting `jmsdelim`. Suppose we have defined a macro `\Psh` for the free co-completion, following the notation of the French school, and we wish to parenthesize an instance of it:

$\mathrm{Hom}_{\mathbf{Cat}}(1, \widehat{\mathbb{C}})$

```
\NewDocumentCommand\Cat{}{\mathbf{Cat}}
\NewDocumentCommand\Psh{m}{\widehat{#1}}
\NewDocumentCommand\Hom{mmm}{
  \operatorname{Hom}_{#1}(#2,#3)
}
\[\Hom{\Cat}{1}{\Psh{\mathbb{C}}}\]
```

One might have tried to get a better result by using `\left` and `\right`:

$\text{Hom}_{\text{Cat}}(1, \widehat{\mathbb{C}})$	<pre>\NewDocumentCommand\Cat{}\{\mathbf{Cat}\} \NewDocumentCommand\Psh{m}\{\widehat{#1}\} \NewDocumentCommand\HomX{mmm}\{ \operatorname{Hom}_{#1}\left(#2,#3\right) \}</pre>
$\text{Hom}_{\text{Cat}}(1, \widehat{\mathbb{C}})$	<pre>\NewDocumentCommand\Hom{mmm}\{ \operatorname{Hom}_{#1}\mleft(#2,#3\mright) \} \[\Hom{\Cat}{1}\{\Psh{\mathbb{C}}\}\ \] \[\HomX{\Cat}{1}\{\Psh{\mathbb{C}}\}\ \]</pre>

The above is hugely worse: the height of the hat does not in any way determine the correct size for the delimiter! The solution using `jmsdelim` is quite simple, however: first, we change `\Hom` to call `\DelimPrn`, and then we use `\DelimMin` within the `\Psh` notation.

$\text{Hom}_{\text{Cat}}(1, \widehat{\mathbb{C}})$	<pre>\NewDocumentCommand\Cat{}\{\mathbf{Cat}\} \NewDocumentCommand\Psh{m}\{\DelimMin{1}\widehat{#1}\} \NewDocumentCommand\Hom{mmm}\{ \operatorname{Hom}_{#1}\DelimPrn{#2,#3} \} \[\Hom{\Cat}{1}\{\Psh{\mathbb{C}}\}\ \]</pre>
--	---

`\DelimBump`

`\DelimBump`

This increases the minimum delimiter size by one outside the current location. This can be used to achieve a readable notation for cuts in sequent calculus as in Munch-Maccagnoni [Mun13; Mun17], for instance:

$\langle t \parallel \tilde{\mu}x. \langle \mu\alpha. \langle u \parallel e \rangle \parallel e' \rangle \rangle$	<pre>\NewDocumentCommand\Cut{mm}\{% \DelimBump% \DelimBetweenSurround{\langle}\{\Vert\}\{\rangle}\{#1\}{#2}\% \} \NewDocumentCommand\Mu{mm}\{\mu #1.#2\} \NewDocumentCommand\MuTilde{mm}\{\tilde{\mu} #1.#2\} \[\ \Cut{t}\{ \MuTilde{x}\{ \Cut{\Mu{\alpha}}{\Cut{u}{e}}\}{e'} \} \} \]</pre>
---	--

1.2 Basic Delimiter commands

Like `mleft` and `mright` [Obe16], `jmsdelim` ensures the correct amount of space on the outside of the delimiters using `\mathopen` and `\mathclose`.

`\DelimSurround`

`\DelimSurround{<left>}{<right>}{<body>}`

Surrounds `<body>` with appropriately sized `<left>` and `<right>` delimiters respectively.

<hr/> <hr/>	<code>\DelimBetween</code>	<code>\DelimSurround{⟨sep⟩}{⟨lbody⟩}{⟨rbody⟩}</code>
		Places an appropriately sized <code>⟨sep⟩</code> between <code>⟨lbody⟩</code> and <code>⟨rbody⟩</code> .

<hr/> <hr/>	<code>\DelimBetweenSurround</code>	<code>\DelimSurround{⟨left⟩}{⟨sep⟩}{⟨right⟩}{⟨lbody⟩}{⟨rbody⟩}</code>
		Places an appropriately sized <code>⟨sep⟩</code> between <code>⟨lbody⟩</code> and <code>⟨rbody⟩</code> , surrounding the result by <code>⟨left⟩</code> and <code>⟨right⟩</code> respectively.

1.3 Derived delimiter commands

<hr/> <hr/>	<code>\DelimPrn</code>	<code>\DelimPrn{⟨body⟩}</code>
		Surrounds <code>⟨body⟩</code> in parentheses.

<hr/> <hr/>	<code>\DelimBrk</code>	<code>\DelimBrk{⟨body⟩}</code>
		Surrounds <code>⟨body⟩</code> in square brackets.

<hr/> <hr/>	<code>\DelimBrc</code>	<code>\DelimBrc{⟨body⟩}</code>
		Surrounds <code>⟨body⟩</code> in curly braces.

<hr/> <hr/>	<code>\DelimGl</code>	<code>\DelimGl{⟨body⟩}</code>
		Surrounds <code>⟨body⟩</code> in angle brackets.

<hr/> <hr/>	<code>\DelimBbrk</code>	<code>\DelimBbrk{⟨body⟩}</code>
		Surrounds <code>⟨body⟩</code> in Scott brackets (requires <code>\llbracket</code> , <code>\rrbracket</code> to be defined).

1.4 Configuration and options

<hr/> <hr/>	<code>\jmsdelimsetup</code>	<code>\jmsdelimsetup{⟨options⟩}</code>
		<code>jmsdelim</code> can be customized along a few axes.

<hr/> <hr/>	<code>size_ commands</code>	The option <code>size commands</code> is a comma-separated list which contains a list of sizing commands for delimiters, from smallest to largest.
-------------	-----------------------------	--

1.5 Interface for macro authors

The internals of `jmsdelim` are implemented in `expl3`.

jmsdelim_surround:nnn

jmsdelim_surround:nnn $\{\langle left \rangle\} \{\langle right \rangle\} \{\langle body \rangle\}$

This routine surrounds $\langle body \rangle$ with the delimiters $\langle left \rangle$ and $\langle right \rangle$ of the appropriate size respectively.

jmsdelim_between:nnn

jmsdelim_between:nnn $\{\langle sep \rangle\} \{\langle lbody \rangle\} \{\langle rbody \rangle\}$

This routine separates $\langle lbody \rangle$ and $\langle rbody \rangle$ with a separator $\langle sep \rangle$ of the appropriate size.

jmsdelim_between:nnnnn

jmsdelim_between:nnnnn $\{\langle left \rangle\} \{\langle sep \rangle\} \{\langle right \rangle\} \{\langle lbody \rangle\} \{\langle rbody \rangle\}$

This routine separates $\langle lbody \rangle$ and $\langle rbody \rangle$ with a separator $\langle sep \rangle$ of the appropriate size, and surrounds the result by $\langle left \rangle$ and $\langle right \rangle$ respectively of the same size.

2 Extended example from perfectcut

The following states the idempotency of an adjunction:

$$\langle t \parallel \tilde{\mu}x. \langle \mu\alpha. \langle u \parallel e \rangle \parallel e' \rangle \rangle = \langle \mu\alpha. \langle t \parallel \tilde{\mu}x. \langle u \parallel e \rangle \parallel e' \rangle \rangle$$

The following states the commutativity of a strong monad:

$$\langle t \parallel \tilde{\mu}x. \langle u \parallel \tilde{\mu}y. \langle v \parallel e \rangle \rangle \rangle = \langle u \parallel \tilde{\mu}y. \langle t \parallel \tilde{\mu}x. \langle v \parallel e \rangle \rangle \rangle$$

Using `\underline` to mark redexes:

$$\begin{aligned} & \delta(V, x.y, x.y) \\ &= \mu\star. \left\langle V \parallel [\tilde{\mu}x. \underline{\langle y \parallel \star \rangle} \mid \tilde{\mu}x. \underline{\langle y \parallel \star \rangle}] \right\rangle \\ &= \mu\star. \left\langle V \parallel [\tilde{\mu}x. \langle \iota_1(x) \parallel \tilde{\mu}z. \underline{\langle y \parallel \star \rangle} \rangle \mid \tilde{\mu}x. \langle \iota_2(x) \parallel \tilde{\mu}z. \underline{\langle y \parallel \star \rangle} \rangle] \right\rangle \\ &= \mu\star. \left\langle V \parallel \underline{\tilde{\mu}z. \langle y \parallel \star \rangle} \right\rangle \\ &= \mu\star. \langle y \parallel \star \rangle \\ &= y \end{aligned}$$

`\ignoremathstyle`

`\NewDocumentCommand\Cut{mm}{%`

`\DelimBump\DelimBetweenSurround{\langle}{\Vert}{\rangle}{#1}{#2}%`

`}`

`\NewDocumentCommand\mt{}{\tilde\mu}`

`\NewDocumentCommand\Case{mm}{%`

`\DelimBetweenSurround{[]}{\vert}{[]}{#1}{#2}%`

`}`

The following states the idempotency of an adjunction:

`\[`

`\Cut{t}{\mt x.\Cut{\mu\alpha.\Cut{u}{e}}{e'}}=\Cut{\mu\alpha.\Cut{t}{\mt x.\Cut{u}{e}}}{e'}`

`\]`

The following states the commutativity of a strong monad:

```

\[
\Cut t{\mt x.\Cut u{\mt y.\Cut ve}}=\Cut u{\mt y.\Cut t{\mt x.\Cut ve}}
\]
Using \cs{underline} to mark redexes:
\begin{align*}
& \& \delta(V,x.y,x.y)\backslash\backslash \\
& \& = \mu\{\star\}. \\
& \quad \Cut{V}\{ \\
& \quad \quad \Case{ \\
& \quad \quad \quad \mt x.\underline{\Cut y\{\star\}} \\
& \quad \quad \quad \}\{ \\
& \quad \quad \quad \mt x.\underline{\Cut y\{\star\}} \\
& \quad \quad \quad \} \\
& \quad \quad \}\backslash\backslash \\
& \& = \mu\{\star\}. \\
& \quad \Cut{V}\{ \\
& \quad \quad \underline{ \\
& \quad \quad \quad \Case{ \\
& \quad \quad \quad \quad \mt x.\Cut\{\iota_1\}(x)\}\{\mt z.\Cut\{y\}\{\star\}\} \\
& \quad \quad \quad \}\{ \\
& \quad \quad \quad \mt x.\Cut\{\iota_2\}(x)\}\{\mt z.\Cut\{y\}\{\star\}\} \\
& \quad \quad \quad \} \\
& \quad \quad \}\backslash\backslash \\
& \& = \mu\{\star\}.\Cut{V}\{\underline{\mt z.}\Cut\{y\}\{\star\}\}\backslash\backslash \\
& \& = \mu\{\star\}.\Cut\{y\}\{\star\}\backslash\backslash \\
& \& = y \\
\end{align*}

```

3 jmsdelim implementation

```

1 <{*package}
2 \RequirePackage{expl3}
3 \RequirePackage{l3keys2e}
4 \RequirePackage{xparse}
5 \RequirePackage{ifluatex}
6 \RequirePackage{scalereel}
7 \ProvidesExplPackage {jmsdelim} {2020/11/02} {0.2.0}
8 {Compositional delimiter sizing}
9 <@@=jmsdelim>

```

We first declare the options for the jmsdelim module, together with their default values.

```

10 \keys_define:nn { jmsdelim } {
11   size-commands .clist_set:N = \l__jmsdelim_size_cmds,
12 }
13 \keys_set:nn { jmsdelim } {
14   size-commands = {\},\big,\Big,\bigg,\Bigg},
15 }

```

Then, we set up the internal state that will be used by jmsdelim.

```

16 \int_new:N \g__jmsdelim_size

```

```

17 \int_gset:Nn \g__jmsdelim_size {0}
18 \bool_new:N \g__jmsdelim_bump
19 \bool_gset:Nn \g__jmsdelim_bump \c_false_bool

```

`__jmsdelim_clist_item:Nn` A version of `\clist_item:Nn` that takes the last item when the index is out of bounds.

```

20 \cs_new:Npn \__jmsdelim_clist_item:Nn #1 #2 {
21   \clist_item:Nn #1 {
22     \int_min:nn { #2 } {\clist_count:N #1}
23   }
24 }

```

(End definition for __jmsdelim_clist_item:Nn.)

`__jmsdelim_set_delim_size:n` Updates the current delimiter size only if it results in an increase.

```

25 \cs_new:Npn \__jmsdelim_set_delim_size:n #1 {
26   \int_gset:Nn \g__jmsdelim_size {
27     \int_max:nn {\g__jmsdelim_size} {#1}
28   }
29 }

```

(End definition for __jmsdelim_set_delim_size:n.)

`__jmsdelim_incr_delim_size:` Increases the current delimiter size by 1.

```

30 \cs_new:Npn \__jmsdelim_incr_delim_size: {
31   \__jmsdelim_set_delim_size:n {\g__jmsdelim_size + 1}
32 }

```

(End definition for __jmsdelim_incr_delim_size:.)

3.1 Preservation of math styles

It is fairly complicated and inefficient to preserve math styles across boxes. There is an appropriate way to do so in Lua^AT_EX, which we use conditionally if available; otherwise, we make use of `\ThisStyle` and `\SavedStyle` from `scalerel`, which are more inefficient. In fact, it becomes impossible to use `jmsdelim` in PDF^AT_EX when the nesting is sufficiently deep, whereas there is no corresponding blowup in Lua^AT_EX. The `\ignoremathstyle` and `\discernmathstyle` macros from `scalerel` can be used to turn off the inefficient preservation of math styles locally, such as in the case where no subscripts are used.

`__jmsdelim luatex_save_mathstyle:N`

```

33 \cs_new:Npn \__jmsdelim_luatex_save_mathstyle:N #1 {
34   \ifcase \mathstyle
35     \cs_set_eq:NN #1 \displaystyle
36   \or
37     \cs_set_eq:NN #1 \crampeddisplaystyle
38   \or
39     \cs_set_eq:NN #1 \textstyle
40   \or
41     \cs_set_eq:NN #1 \crampedtextstyle

```

```

42 \or
43 \cs_set_eq:NN #1 \scriptstyle
44 \or
45 \cs_set_eq:NN #1 \crampedscriptstyle
46 \or
47 \cs_set_eq:NN #1 \scriptscriptstyle
48 \or
49 \cs_set_eq:NN #1 \crampedscriptscriptstyle
50 \fi
51 }

```

(End definition for __jmsdelim luatex_save_mathstyle:N.)

`__jmsdelim_restore_mathstyle:n`

```

52 \cs_new:Npn \__jmsdelim_restore_mathstyle: {
53 \SavedStyle
54 }

```

(End definition for __jmsdelim_restore_mathstyle:n.)

`__jmsdelim_save_mathstyle:n`

```

55 \cs_new:Npn \__jmsdelim_save_mathstyle:n #1 {
56 \ifluatex
57 \__jmsdelim luatex_save_mathstyle:N \__jmsdelim_restore_mathstyle:
58 #1
59 \else
60 \ThisStyle{#1}
61 \fi
62 }

```

(End definition for __jmsdelim_save_mathstyle:n.)

`__jmsdelim_hbox_set:Nn` Can only be called in a `__jmsdelim_save_mathstyle:n` scope.

```

63 \cs_new:Npn \__jmsdelim_hbox_set:Nn #1 #2 {
64 \mode_if_math:TF
65 { \hbox_set:Nn #1 { $\__jmsdelim_restore_mathstyle: #2$ } }
66 { \hbox_set:Nn #1 { #2 } }
67 }

```

(End definition for __jmsdelim_hbox_set:Nn.)

3.2 Public interface for macro authors

`__jmsdelim_scope:n`

```

68 \cs_new:Npn \__jmsdelim_scope:n #1 {
69 \group_begin:
70 \__jmsdelim_save_mathstyle:n {#1}
71 \group_end:
72 }

```

(End definition for `__jmsdelim_scope:n`.)

`__jmsdelim_typeset:Nn`

```

73 \cs_new:Npn \__jmsdelim_typeset:Nn #1 #2 {
74   \bool_set:Nn \l_tmpa_bool \g__jmsdelim_bump
75   \int_set:Nn \g__jmsdelim_size {0}
76   \bool_set:Nn \g__jmsdelim_bump \c_false_bool
77
78   \__jmsdelim_hbox_set:Nn #1 {#2}
79
80   \bool_if:NT \g__jmsdelim_bump {
81     \bool_if:NF \l_tmpa_bool {
82       \__jmsdelim_incr_delim_size:
83     }
84   }
85
86   \cs_set_nopar:Npn \jmsdelim_size_cmd: {
87     % \int_use:N \g__jmsdelim_size
88     \__jmsdelim_clist_item:Nn \l__jmsdelim_size_cmds {
89       \g__jmsdelim_size + 1
90     }
91   }
92 }

```

(End definition for `__jmsdelim_typeset:Nn`.)

`jmsdelim_surround:nnn`

```

93 \cs_new:Npn \jmsdelim_surround:nnn #1 #2 #3 {
94   \__jmsdelim_scope:n {
95     \__jmsdelim_typeset:Nn \l_tmpa_box {#3}
96
97     \mathopen\jmsdelim_size_cmd: {#1}
98     \box_use:N \l_tmpa_box
99     \mathopen\jmsdelim_size_cmd: {#2}
100   }
101 }

```

(End definition for `jmsdelim_surround:nnn`. This function is documented on page 4.)

`jmsdelim_between:nnn`

```

102 \cs_new:Npn \jmsdelim_between:nnn #1 #2 #3 {
103   \__jmsdelim_scope:n {
104     \__jmsdelim_typeset:Nn \l_tmpa_box {#2}
105     \__jmsdelim_typeset:Nn \l_tmpb_box {#3}
106     \box_use:N \l_tmpa_box
107     \mathrel{\jmsdelim_size_cmd: {#1}}
108     \box_use:N \l_tmpb_box
109   }
110 }

```

(End definition for `jmsdelim_between:nnn`. This function is documented on page 4.)

jmsdelim_between:nnnnn

```
111 \cs_new:Npn \jmsdelim_between:nnnnn #1 #2 #3 #4 #5 {
112   \__jmsdelim_scope:n {
113     \__jmsdelim_typeset:Nn \l_tmpa_box {#4}
114     \__jmsdelim_typeset:Nn \l_tmpb_box {#5}
115
116     \mathopen\jmsdelim_size_cmd: {#1}
117     \box_use:N \l_tmpa_box
118     \mathrel{\jmsdelim_size_cmd: {#2}}
119     \box_use:N \l_tmpb_box
120     \mathclose\jmsdelim_size_cmd: {#3}
121   }
122 }
```

(End definition for jmsdelim_between:nnnnn. This function is documented on page 4.)

3.3 Document interace

DelimMin

```
123 \NewDocumentCommand\DelimMin{m}{
124   \__jmsdelim_set_delim_size:n {#1}
125 }
```

(End definition for DelimMin. This function is documented on page 1.)

DelimBump

```
126 \NewDocumentCommand\DelimBump{}{
127   \bool_gset:Nn \g__jmsdelim_bump \c_true_bool
128 }
```

(End definition for DelimBump. This function is documented on page 2.)

DelimSurround

```
129 \NewDocumentCommand\DelimSurround{mmm}{
130   \jmsdelim_surround:nnn {#1} {#2} {#3}
131 }
```

(End definition for DelimSurround. This function is documented on page 2.)

DelimBetween

```
132 \NewDocumentCommand\DelimBetween{mmm}{
133   \jmsdelim_between:nnn {#1} {#2} {#3}
134 }
135 \NewDocumentCommand\DelimBetweenSurround{mmmm}{
136   \jmsdelim_between:nnnnn {#1} {#2} {#3} {#4} {#5}
137 }
```

(End definition for DelimBetween. This function is documented on page 3.)

DelimPrn

```
138 \NewDocumentCommand\DelimPrn{m}{  
139   \jmsdelim_surround:nnn {(} {)} {#1}  
140 }
```

(End definition for *DelimPrn*. This function is documented on page 3.)

DelimBrk

```
141 \NewDocumentCommand\DelimBrk{m}{  
142   \jmsdelim_surround:nnn {[} {]} {#1}  
143 }
```

(End definition for *DelimBrk*. This function is documented on page 3.)

DelimBrc

```
144 \NewDocumentCommand\DelimBrc{m}{  
145   \jmsdelim_surround:nnn {\lbrace} {\rbrace} {#1}  
146 }
```

(End definition for *DelimBrc*. This function is documented on page 3.)

DelimBbrk

```
147 \NewDocumentCommand\DelimBbrk{m}{  
148   \jmsdelim_surround:nnn {\llbracket} {\rrbracket} {#1}  
149 }
```

(End definition for *DelimBbrk*. This function is documented on page 3.)

DelimGl

```
150 \NewDocumentCommand\DelimGl{m}{  
151   \jmsdelim_surround:nnn {\langle} {\rangle} {#1}  
152 }
```

(End definition for *DelimGl*. This function is documented on page 3.)

```
153 \ProcessKeysPackageOptions {jmsdelim}
```
